**Winnipeg Office — — 704 McIntyre Block**

**Mr.**

*Small bites at a time but many bites*

*No clogging—no stopping to clean*

# The "Wonder" Double-Cutting Mower

---

## Time is Money

Without labour-saving machinery Western Canada's agricultural activities, prosperity and wealth would be materially less than it is today. Natural climatic conditions, short seasons and labour problems make it imperative that the Western farmer has the very best and most efficient machinery. Time is often of greater value than capital outlay. Every hour lost is money lost.

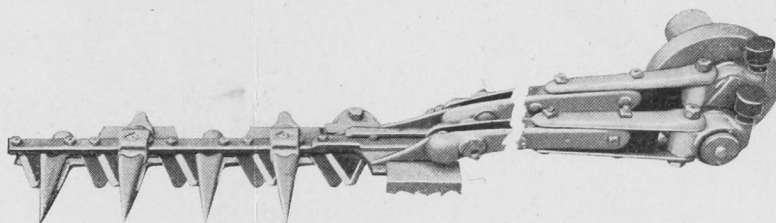

## No Disappointment

The "Wonder" Mower is the very latest improvement in its class. It does exactly what is expected that it should do as a mower. There is no disappointment. It does a full day's work in a day's time—not an hour is lost through changed conditions or unexpected circumstances.

## Cut Anything

The "Wonder" Mower has been thoroughly tested. It cuts prairie wool, wire grass, alkali grass, Bermuda grass, heavy corn stalks, cotton stalks, alfalfa or timothy in all conditions, wet bottom grass or willows. It makes a complete and clean job in record time without hitch or delay.

## Double Shearing Action

Here is the Canadian invention, manufactured in Canada, which permitted a pair of 1000-lb. three-year-old colts to handle a job with ease under conditions that would ordinarily call for at least three much heavier horses.

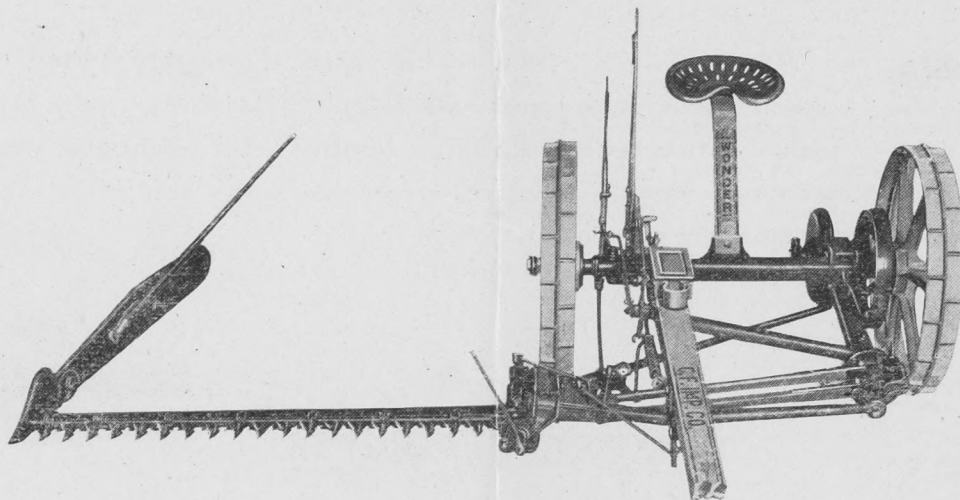

# ADVANTAGES

The cutter bar of the "Wonder" Mower has two knives superimposed with their flat surfaces working against each other. A double eccentric moves the knives in opposing directions and equalizes the thrust on the drive shaft. The stroke of the knife is shortened and is therefore proportionally more powerful. The drive shaft is geared low and while the eccentric moves slower the combined reciprocations of the two knives provide a greatly increased number of shearings.

This arrangement strikes at the root of the defects of the old-style Mowers, with results as follows:

Greatly reduced draft;  
Vibration eliminated;  
Small quantities of material cut at a time;  
Greater number of cuts per minute;  
Increased shearing power;

Slower movement of working parts;  
Less strain on driving gear;  
Knives largely self-sharpening;  
75 per cent. less sharpening of knives;  
No clogging and a clean cut.

## PRICE

THE "WONDER" MOWER - - \$90.00

## A FEW TESTIMONIALS

Medicine Hat, August 9th, 1922.  
Canadian Farm Implement Co., Ltd.,  
Medicine Hat, Alta.

Dear Sirs: I have pleasure in informing you of the results of your new "Wonder" Mower, which I purchased from you on July 14th last.

My hay crop was exceedingly heavy, as will be seen by the fact that we took 214 loads off 40 acres of alfalfa. These loads, I would judge, would go over 1 ton in weight, as the racks were 9x18x4. This hay was chiefly alfalfa, with an undergrowth of blue joint, broom grass, wild rye grass and red top, and owing to a heavy storm was so badly lodged and down that our ordinary mower could only work about three hours per day owing to the moisture not being able to get out of the hay.

Your "Wonder" Mower gave us no trouble whatsoever, and cut everything that came between the knives; there is an absence of vibration and side draft is slightly reduced. I consider it 50 per cent. lighter draft, and it is without doubt the best mower we have ever used.

I consider the "Wonder" Mower far superior to any mower on the market today.

Yours very truly,  
(Sgd.) F. O. SISSONS.

Armstrong, B.C., August 9th, 1921.  
Canadian Farm Implement Co., Ltd.,  
619 Pender Street, Vancouver.

Dear Sirs: This is to certify that your representative, Mr. M. N. Paterson, came to the L. & A. Ranch today with your "Wonder" Shearing Sickle Mower and made a demonstration in heavy tangled second crop alfalfa which was very heavy and lodged. Mr. Paterson pulled in with four other machines working in the same field (.....). Mr. Paterson cut all day with the poorest team in the field and the "Wonder" Shearing Sickle never once clogged or choked and the team during the demonstration did not sweat. But the other teams were better horses and the machines were continually choking and clogging and the horses were very wet. There is absolutely no comparison between your machine and the present-day mower. There is no question but it is lighter draft and more efficient in every way and we the undersigned farmers of this district welcome this wonderful invention.

Dear Sirs: We cannot speak too highly of your new "Wonder" Mower. We have been using it in a very heavy crop of alfalfa with entire satisfaction.

There has been no delay from any cause and it has been running three days without change or sharpening the sickle. It has an extremely light draft and the absence of vibration is very noticeable. It is the best mower we have ever used.

Yours truly,  
(Sgd.) STARKS & BURTON,  
Ranchers.

Chilliwack, B.C., October 11th, 1922.  
Canadian Farm Implement Co., Ltd.,  
Medicine Hat, Alta.

Dear Sirs: I have today had the pleasure of operating one of your "Wonder" Mowers and can truthfully say that it beats any mowing machine I ever saw run and I have tried it where the ..... gave it up, and this machine cut as if nothing was in front of it.

We had given it up with three..... and cut more hay with your machine in a few hours than we cut all day with the three other machines. There is no kind of hay I have not mown with it. No one will ever regret one of your machines.

Yours respectfully,  
(Sgd.) A. DENHAM.

Chilliwack, B.C., October 11th, 1922.  
The Canadian Farm Implement Co., Ltd.,  
Medicine Hat, Alta.

Dear Sirs: I have very much pleasure in recommending your "Wonder" Mower as I have given it a fair trial in a field of second growth timothy hay that was badly lodged and very heavy. After trying to cut it with two different ..... machines unsuccessfully, I was recommended to try Mr. L. L. Chadsey, your agent, and I cut more hay in three hours than I had done in twice the time with the other two machines.

Yours sincerely,  
(Sgd.) R. J. BANFORD.
